- ✔ Plausible estimated SoH value

BECM - Estimated State of Health (SoH)

96%

Note! This tool performs checks for known issues or limitations when possible, it does not perform separate calculations of, or modifications to, the in-vehicle estimated SoH, and should be used with other information such as vehicle age, usage, and input from the customer. The reported SoH presented in this tool does not serve as proof or formal certification of the current SoH, nor does it give any indication or prediction for future degradation. The reported SoH shall not be used as a determining factor in evaluating whether any component of the high-voltage system is faulty, and it does not replace other data or indicators such as DTCs indicating, or not indicating, failure.
